

What test can be done to identify

Advanced HIV Disease (AHD)?

The most reliable way of
identifying AHD is by
conducting a CD4 test.

Through the generous support of Unitaid, the Clinton Health Access Initiative (CHAI)-led THRIVE Project is enabling access to critical prevention, screening, and treatment commodities for advanced HIV disease to dramatically reduce mortality among adults and children living with HIV. In partnership with CHAI through this project, AFROCB is leading community and civil society engagement in collaboration with global and local stakeholders.

All views expressed within these materials are AFROCB's own.
